India and Russia together have aligned interest of creating multipolar world with the decline of the America led unipolar world order. But countries like India, Russia, Argentina, Brazil, France etc make a group of 20 to solve the economic, environmental problems and except Russia problems it make a good relation between the countries and India have already taken the first step for making a good relation between India and Russia. India do collaboration with Russia in the Project of Brahmaputra.

Brahmaputra, the super sonic anti ship missile jointly developed by India and Russia, was successfully flight tested from an undisclosed location in the Bay of Bengal off Chennai coast on February 12, 2003.

The Test was conducted from a Naval Ship INS Rajah. The missile is marginally over 8 metre in length, 650 mm in diameter and weighs 5000 kg. It contains the pop-up system with sophisticated on board computer guidance developed by Indian space scientists. It is a missile of Russian's missile on ship system with sophisticated on board computer guidance developed by Indian space scientists. It is a missile of Russian's missile on ship system with sophisticated on board computer guidance developed by Indian space scientists.

The Brahmaputra 3000 is a multi stage anti ship missile. It is a missile of Russian's missile on ship system with sophisticated on board computer guidance developed by Indian space scientists. It is a missile of Russian's missile on ship system with sophisticated on board computer guidance developed by Indian space scientists.

India and Russia together have aligned interest of creating multipolar world with the decline of the America and imperious world order but countries like India, Russia, Argentina, Brazil, Egypt etc make a group of 20 to solve the economic, environmental problems and except these problems it make a good relation between the countries and India have already taken the first step for making a good relation between India and Russia. India do collaboration with Russia in the context of Brahmaputra.

Brahmaputra, the super sonic anti-air missile jointly developed by India and Russia, was successfully flight-tested from an undisclosed location in the Bay of Bengal, off eastern coast of February 17, 2008.

The Test was conducted from a Naval Ship off the Bay of Bengal. The missile is marginally over 8 meter in length, 650 mm in diameter and weighs 5000 kg. It contains the propulsion system and self made guidance system. It contains the propulsion system and self made guidance system. It contains the propulsion system and self made guidance system. It contains the propulsion system and self made guidance system.
